Specifications subject to change without notice.

(Note 1) Surface temperature must not exceed 80 degrees C; thermal management actions may be required.

(Note 2) Input current in excess of maximum may indicate a load/inverter mismatch condition, which can result in reduced reliability. Please contact ERG technical support.

(Note 3) Provided data is not tested but guaranteed by design.

(Note 4) Required User Enable/Disable Interface Circuit is shown on page 3.

(Note 5) Valid only with "C" jumper (JP1) removed.

(Note 6) With the inverter powered and JP1 is in place, a ground applied to the enable pin J1-5 will open the inverter fuse.

Application Notes:

- 1) The minimum distance from high voltage areas of the inverter to any conductive material should be .12 inches per kilovolt of starting voltage.
- 2) Mounting hardware to be non-conductive.
- 3) Open framed inverters should not be used in applications at altitudes over 10,000 feet.
- 4) ACreturn should be left floating, not grounded.
- 5) Contact ERG for possible exceptions.

PWM Dimming

(Valid only with the "C" jumper (JP1) removed)

Required User Enable/Disable Interface Circuit

Circuit or equivalent required with the "C" jumper removed for proper inverter turnoff.

* should be selected to be compatible with LCD and display driver

With the "C" jumper (JP1) in place, a ground applied to the enable pin J1-5 will open the inverter fuse.

V _{in}	R1	R2
5V	3.3K	1.5K
8V	3.3K	1.8K
12V	3.3K	2.2K
24V	10.0K	8.2K

- (1) Low ESR type input by-pass capacitor (22 uF - 100 uF) may be required to reduce reflected ripple.
- (2) V_{PWM} from 2.4V to less than or equal to +V_{in}.
- (3) Full brightness without PWM control requires that pin 5 be tied to +V_{in}. Pin 5 must be at 0V to turn off.
- (4) Duty Cycle 5% - 100%.
