Specifications and Applications Information

12/11/03

Preliminary

The ERG 8mD3041 (8mD Series) DC to AC inverter features onboard connectors and can be easily dimmed using an external analog control signal or external PWM generator.

Powered by a regulated +12 Volt DC source, the 8mD3041 is designed to power the Toshiba LTM09C362S display backlight.

Product Features

- ✓ Small Package Size, less than 9mm in height.
- ✓ High Dimming Ratio
- ✓ High Efficiency
- ✓ Made in U.S.A.

This unit complements our 8m Series of DC to AC Inverters

8mD Package

PCB components are shown for reference only.
 Actual product may differ from that shown.

Connectors

J1 Molex 53261-0590	J2 JST SM02B-BHSS-1-TB
------------------------	---------------------------

8mD3041

**Single Tube
DC to AC Inverter**

Package Configuration

Mass: 15 grams

Pin Descriptions

J1-1 Vin	J2-1 ACout
J1-2 GND	J2-2 ACcom
J1-3 Enable	
J1-4 Control	
J1-5 N/C	

Absolute Maximum Ratings (Note 1)

Rating	Symbol	Value	Units
Input Voltage	V_{in}	-0.3 to +13.2	Vdc
Enable	V_{Enable}	-0.3 to +13.2	Vdc
Operating Temperature	T_a	-0 to +70	°C
Storage Temperature	T_s	-40 to +85	°C

Recommended Operating Conditions

Rating	Symbol	Value	Units
Input Voltage	V_{in}	+6 to 13.2	Vdc
Operating Temperature <small>(Note 2)</small>	T_a	0 to +50	°C

Electrical Characteristics

Unless otherwise noted $V_{in} = 12.00$ Volts dc and $T_a = 25^\circ\text{C}$

Characteristic	Symbol	Min	Typ	Max	Units
Input Current	I_{in}	-	.25	.29	A_{DC}
Input Ripple Current	I_{rip}	-	20	-	mA_{pk-pk}
Operating Frequency	F_o	28	33	38	KHz
Efficiency	η	-	78	-	%
Output Voltage	V_{start}	1300	-	-	V
Output Voltage <small>(Note 3)</small>	V_{out}	-	570	-	V
Output Current	I_{out}	-	3.0	-	$mArms$
Enable (pin J1-3) <small>(Note 4)</small>					
Turn-off Threshold	V_{thoff}	0	-	1	V
Turn-On Threshold	V_{thon}	2.5	-	V_{in}	V
Impedance to Vin	$R_{Disable}$	44.6	47	49.4	kOhms

(Note 1) Reliable and predictable operation of the device is not guaranteed with applied stresses at or beyond those listed in "Absolute Maximum Ratings". Operation at these limits may reduce device reliability and is therefore not recommended. Please refer to "Recommended Operating Conditions" for reliable operation of the device.

(Note 2) Reliable operation above 50°C is possible if airflow is provided.

(Note 3) When powering a load simulating the referenced display

(Note 4) The inverter is always enabled with an internal pullup resistor tied to the enable pin. A ground on the enable input will turn the inverter off.

Onboard PWM

Unless otherwise noted $V_{in} = 12.00$ Volts DC , $T_a = 25$ °C and unit has been running for 5 minutes.

Characteristic	Symbol	Min	Typ	Max	Units
Frequency	f_{pwm}	-	160	-	Hz
Control Input Bias Current	I_{cbias}	-	-	10	μA

Pin Descriptions

V_{in} Input voltage to the inverter.

GND Inverter ground.

Control Analog voltage input to the onboard pulse width modulator. Increasing this voltage increases the off time of the onboard PWM resulting in decreased brightness. The inverter is full on when this voltage is near inverter ground.

Enable Inverter Enable. The inverter is always enabled with an internal pullup resistor tied to the enable pin. Pull this pin low to disable inverter operation. The onboard PWM is always utilized.

Application information

The 8mD series of inverters is designed to power one cold cathode fluorescent tube with four watts. An external analog control interfaces with an onboard pulse width modulator to provide dimming control. The 8mD inverter can reliably dim to less than 5% duty cycle.

External shutdown of the inverter is accomplished using the Enable pin. Pulling this pin low (below V_{thoff}) disables the inverter.

If analog voltage dimming is required, the analog voltage is applied to the Control pin. Figure 1 shows how to connect the inverter for onboard PWM operation. Graph 1 shows the relationship of PWM duty cycle to input control voltage.

If an external PWM is used, simply connect the Enable pin to the PWM source and connect the Control pin to inverter ground. If the onboard PWM is used, connect the analog voltage to the Control pin.
