DMA22700F

Specifications and Applications Information

12/28/10

Two Lamp
DC to AC Inverter

The ERG DMA22700F (*DMA Series*) DC to AC inverter features onboard connectors and can be easily dimmed using an external pulse-width modulated control signal. This unit is less than 13mm in height and the two mounting holes make installation very straight forward.

Powered by a regulated 12 volt DC source the DMA22700F is specially designed to power the Sharp LQ104S1DG21 and LQ104V1DG51 backlights.

Specifications subject to change without notice.

(Note 1) Surface temperature must not exceed 80 degrees C; thermal management actions may be required.

(Note 2) Input current in excess of maximum may indicate a load/inverter mismatch condition, which can result in reduced reliability. Please contact ERG technical support.

(Note 3) Provided data is not tested but guaranteed by design.

Application Notes:

- 1) The minimum distance from high voltage areas of the inverter to any conductive material should be .12 inches per kilovolt of starting voltage.
- 2) Mounting hardware to be non-conductive.
- 3) Open framed inverters should not be used in applications at altitudes over 10,000 feet.
- 4) ACreturn should be left floating, not grounded.
- 5) Contact ERG for possible exceptions.

Pin Descriptions

- Vin** Input voltage to the inverter. Both pins should be connected for optimum reliability and efficiency.
- GND** Inverter ground. Both pins should be connected for optimum reliability and efficiency.
- Enable** A positive voltage will turn the inverter on. Grounding this pin will turn the inverter off.

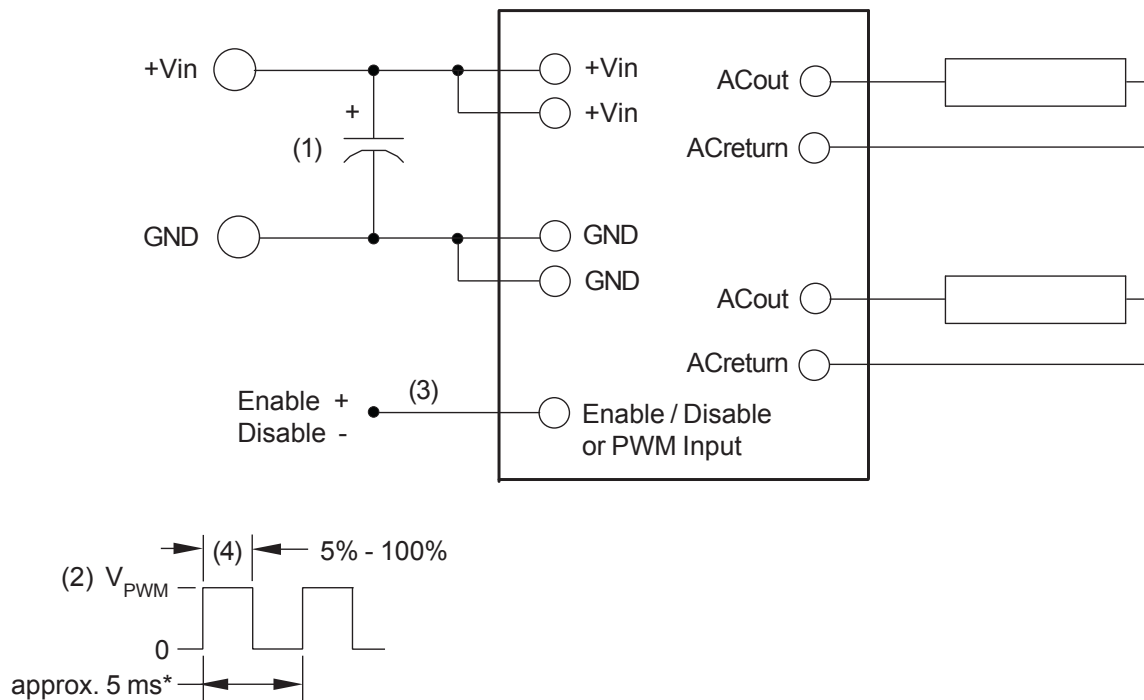

Application information

This inverter is designed to power up to two cold cathode fluorescent lamps.

The enable input allows on /off control of the inverter.

An external PWM source applied to this enable input will provide CCFL dimming.

Special Application

Note 1 Low ESR type input by-pass capacitor (22 μ F - 100 μ F) may be required to reduce reflected ripple.

Note 2 V_{PWM} from 2.4V to less than or equal to +Vin.

Note 3 Full brightness without PWM control requires that pin 5 be tied to +Vin, Pin 5 must be at 0V to turn off.

Note 4 Duty Cycle 5% - 100%.
